IDEATION PHASE

Define the Problem Statements

Design Thinking Methodology
ServiceNow Administration & ETL Track

PROJECT CONTEXT: IMPORT DATA USING TRANSFORM MAPS

This micro project focuses on importing structured bulk employee data from an external spreadsheet into ServiceNow using **Import Sets** and **Transform Maps**. Uncleaned spreadsheets are first ingested into an isolated staging table (u_imp_*) to prevent direct database corruption. A Transform Map then governs field mapping, data transformations, and coalesce logic to safely populate live target tables (e.g., sys_user).

Customer Problem Statement Template

A well-articulated customer problem statement allows the engineering team to identify the exact obstacles stakeholders encounter and design an effective solution. By viewing challenges through the user's lens, participants uncover root causes, emotional impacts, and critical functional criteria rather than jumping prematurely into technical implementations.

1. I AM
Describe the customer with 3–4 key traits. Who are they and what is their role?

2. I'M TRYING TO
List their outcome or job-to-be-done. What business goal are they achieving?

3. BUT
Describe the barrier or obstacle standing directly in their operational path.

4. BECAUSE
Enter the root cause of why the barrier exists. What technical gap must be solved?

5. MAKES ME FEEL
Describe the negative emotional response resulting from the friction and failure.

Benchmark Template Example (Flight Booking Scenario)

Reference: Miro Customer Problem Statement Template

I AM
A traveler

I'M TRYING TO
Book flights on my phone

BUT
It takes a long time

BECAUSE
The website is not responsive and lacks mobile flow

WHICH MAKES ME FEEL
Frustrated

Problem Statement Formulation (ServiceNow ETL)

Applied Analysis for Bulk Spreadsheet Migration via Import Sets & Transform Maps

TEAM ID: SWTID-2026-5019

Problem Statement 1 (PS-1): The ServiceNow System Administrator

I AM A Junior ServiceNow System Administrator responsible for bulk employee onboarding.	I'M TRYING TO Migrate 300+ employee records from Excel into the live sys_user table accurately.	BUT Manual data entry is slow and direct table imports risk creating duplicates or corrupting data.	BECAUSE There is no staging buffer or automated coalesce mapping linking Excel headers to target fields.	WHICH MAKES ME FEEL Anxious about corrupting production data and overwhelmed by manual backlog.
---	---	---	--	--

Problem Statement 2 (PS-2): The HR Data Operations Specialist

I AM An HR Operations Specialist providing quarterly spreadsheet rosters for employee access.	I'M TRYING TO Ensure all newly hired staff receive their ServiceNow logins and correct roles on Day 1.	BUT Spreadsheet records often fail to load, have mismatched department names, or drop key details.	BECAUSE Raw spreadsheet columns are not validated or transformed to match ServiceNow schema constraints.	WHICH MAKES ME FEEL Frustrated by onboarding delays and worried about audit/compliance discrepancies.
---	--	--	--	--

Problem Statement (PS)	I am (Customer / Persona)	I'm trying to (Outcome / Goal)	But (Barrier / Obstacle)	Because (Root Cause)	Which makes me feel (Emotional Impact)
PS-1	Junior ServiceNow Administrator handling bulk organizational onboarding data.	Import hundreds of spreadsheet rows into the sys_user table efficiently with zero manual transcription errors.	Direct data imports cannot handle unstandardized spreadsheets and manual typing creates severe backlogs and duplicate accounts.	The platform lacks a pre-configured Import Set staging table and Transform Map with unique coalesce keys.	Overwhelmed & Anxious about corrupting live production tables.
PS-2	HR Operations Lead / Data Custodian managing cross-departmental personnel records.	Provision new employee profiles, departments, and roles in ServiceNow immediately upon hire date.	Staff cannot access systems on day one due to rejected rows, mismatched reference values, and invalid date formats.	The data pipeline lacks automated schema mapping, data sanitization, and transform log error verification.	Frustrated & Stressed by provisioning delays and compliance risks.

SOLUTION ALIGNMENT: HOW SERVICENOW TRANSFORM MAPS RESOLVE PS-1 & PS-2

By routing the spreadsheet through an **Import Set table**, data is safely quarantined in a staging area before touching production tables. The **Transform Map** automates field mappings, enforces **Coalesce rules** (e.g., matching on user_name or Employee ID to prevent duplicates), and provides detailed **Transform Logs** to verify row-by-row data integrity. This replaces hours of manual data entry with a 2-minute, repeatable, and error-free automated pipeline.
